The Result of An Infatuation

By EUNICE BLAKE

Two men were sitting together at a table in a cafe in Madrid, the one a young American globe trotter, the other a Spaniard who had taken some pains to cultivate his acquaintance. "You noticed the lady," said the

American, "who sat a few seats in front of us last Sunday at the bullfight, the one in red and black?" "I noticed that you admired her." "She is very beautiful. There is

something about her to drive a man "For that reason I shall not intro-

duce her to you."

"You know her?" "Yes." "Introduce me."

"That you may be driven mad?" "It would be very thrilling to be driven mad by her."

"Qh, well, if you insist upon it." "What is ber nationality? She does not look like a Spaniard." "Italian, but she has dwelt in many

Renaud, the person who was to give the introduction, after asking the to call upon her. She received him graciously?

"Ah, Mr. Albertson," she said, "I am only too glad to make your acquaintance. You Americans interest me, There is none of the blase about you that there is about Europeans. You are so enthusiastic, so generous, so intel-

ligent." Albertson was as refreshed by these encomiums in behalf of his countrymen as he would have been by a roller on the beach on an August day, especially as a pair of compelling eyes above the lips were fixed upon his while the words were spoken. If a woman has this great power over a man it is usually instantaneous in its effect. It was with Albertson as if he had quaffed an intoxicating nectar. He passed an evening in a delirium and afterward a night dreaming of Senorita Morelli.

His visits were frequent. It cannot be said that his infatuation increased, for it was born perfect. He was full of gratitude to Renaud for the introduction and could not understand why the Spaniard was not also an adorer of the beautiful Italian. Renaud, instend of encouraging him in his passion, told him to have a care not to become too deeply involved.

There was nothing by which Albertson could judge of the lady's social position, for she was a stranger in Madrid and not expected to have a place in society there. She took care to observe the proprieties and would not accept gifts from her admirer except such as a lady might properly receive from a man. But one day when Albertson called upon her he found her on Wi- and the delay was annoying. Albertson asked to be permitted to advance the amount, but was refused for the time being, though the next day, the funds not arriving, his offer was ac-

Three days elapsed, but no remittance came. Albertson said nothing to Renaud about the loan, but one day wheh the two men were walking together, passing a gentleman evidently

of high degree, Renaud said: Behold your rival for the affections

of your senorita." Albertson's heart stood still. He had begun to suspect that there was something wrong about the expected remittance, and this accusation on that account had more effect. However, he repelled the imputation. Renand told him that if he could get sight of the lady's private papers be would be con-

vinced. After much discussion Renaud suggested a ginn by which Albertson might make the test. Albertson was to take advantage of his intimacy to steal the keys of a certain escretoire in her rooms. Then he was to take her out to dine. While she was gone Renaud was to take the keys, go to the rooms, open the escretoire and bring Albertson finy proof he might find

there of the existence of his rival. Albertson at first promptly declined to have anything to do with such prying, but Renaud artfully worked on his jealousy until he consented. He watted and watched some time for an opportunity, but at last it came, fle carried the keys away with him and gave them to Renaud. The same afterpoon he took the senorita out for a

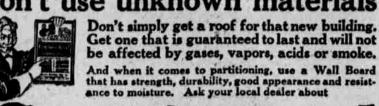

Mrs. Abia Campbell, who has been The next morning he read in a new-pending the summer in Pittsfield, has paper of the arrest of a woman who called herself Adela Morelli in her watching the indy, who was a noted ndventuress. He had used a young American, who was desperately smitten with the woman, & secure certain incriminating papers in her possession, Senorita Morelli was wanted for various crimes, the most important of which was the poisoning of her husband. She would be taken to Italy to

> be tried for her effenses. Albertson was crushed. For a time he could not believe his renses. But at last-he had not been repaid the croney he had advanced-he saw through the whole scheme. He had seen duped not only by the woman, but by Renaud, who, having noticed his infatuation, and introduced him for the purpose of using him to secure evidence needed to obtain her convic-

HIGH EXPLOSIVES.

Making Them Is a Very Delicate and

Complex Process. Almost all the high explosives have cotton as their base. It is true that very good sporting powder can be made from wood pulp; but, as the editor of Nature remarks, "the artillerist would be in great difficulty if he were provided with such a propellant, because in order to obtain any sort of regularity the nitration of the wood pulp has to be kept at a low point, and the ballistics, on which the artillerist

depends, would be quite thrown out." High explosives are cellulese highly nitrated-that is, highly charged with nitrogen. This process consists of immersing cotton waste (that has been repentedly tensled, picked and dried) in a mixture of nitric and sulphuric acids, in the proportion of 71 per cent sulphuric acid, 21 per cent nitric acid and 8 per cent water. After the acids have acted for the required time they are removed. The cotton is washed repeatedly and boiled several times in water. It is then pulped, partly dried and pressed into molds.

The manufacturer does his best to regulate his output, so that it shall contain approximately eleven molecules of nitrate to the quadruple molecule of cellulose, as shown in the formula, or a content of nitrogen that ranges between 12.93 and 13.05 per cent.

The process is delicate and complex. for the proportions of acids and water must be exact and all must be chemically pure. Besides this, the cellulose must be of uniform grade, which is a most difficult thing to obtain.

HE DWELT IN PEACE.

Revolutions In Haiti Didn't Bother the

Old Darky Settler. During one of the revolutions in Haiti a party of Americans made a riding tour of the mountains. One morning a member of the party suddenly drew rein and pointed to a lone ridge where an old tattered stars and stripes fluttered on a bamboo pole.

"We must pay our respects," some one said. After some search they found a path

that zigzagged up to the wild place. They followed it and at last discovered an aged negro sitting before his watfled but smoking his pipe, while he kept an eye on the flag. "What's the flag for?" some one ask-"Pertection," said the old man quiet-

resolution, so I put it up. Yes, suh, I come hear twenty-two yeahs ago, an' has dat flag wid me. I'm George, cook on a steamer outer Savanuah. "Like de place? Yas, sah. Plant yam an' coffee an' cassava. Resolutions don't trouble dis nigger. Ebery

time dey resolute yander up goes de

ly. "I beah dey done begin anudder

fing, an' dat's all dere's to it."-Washington Star.

The Harm of Damp Houses. It is dangerous to health and even to life in a damp, moldy house or one built over a moldy cellar. Many years ago the London Lancet in an article on diphtheria traced the disease in certain cases to the presence of certain molds and fungold growths which seemed to be breathed into the throat. Remember, one of the best disinfectants is lime. Moldy cloths, such as shoes and other articles that are unfit for use, should be destroyed at once.

Well Informed. "There goes a man who has delved

deep in Roman history." "An authority on the subject, ch?" "Sure. He knows lots more about Julius Caesar than the average voter knows about his congressman."-Spokane Review.

Milestones In Life. "Did anything ever feel more conspicuous than your first long trousers?" "Only the vast expanse of my first

INDIA'S QUEER BELIEFS.

Buddhists Would Die Rather Than Lose a Limb or Eat Meat.

India's population is 325,000,000. Practically all the races and religions of the world are represented. Ninety-eight and six-tenths per cent of the people cannot read or write. Four per cent of the inhabitants eat regular meals. The remainder eat when they can and where they can. The average native in India lives on less food per diem than any other human being in the world. Religious prejudices are intense. Men willingly die rather than submit to some dismembering surgical operation, for did not Allah command them to appear before him as they left

him to come into the world? The Buddhists will not eat meat or take even a medicine derived from an animal. They died by millions during the bubonic plague rather than take a prophylactic serum made from pepsin and beef broth-because the pig from which pepsin was obtained was unclean to the Mohammedan and Hindu, and the killing of this animal and the bull from which the broth was made was against the tenets of the Buddhistic faith, I knew an editor in Poons, India, to absolutely refuse a \$3,000 yearly advertisement of a patent medicine because it contained pepsin.

Indians are fond of sweets and last year imported over \$40,000,000 worth of sugar. Clothing is made chiefly from cotton, which is largely grown in the country.-W. E. Aughinbaugh in Leslie's.

When You "See Stars."

The man who when struck violently on the head says he "saw stars" is not far from telling the truth. The fact is that there is a phosphorescent power in the eye which does not attract a person's attention under ordinary conditions, but which is distributed and reveals itself whenever the head gets a sudden shock and sometimes even in the act of sneezing. A blow on the head results in a pressure of the blood vessels upon the retina, causing either total darkness or a faint blue light which floats before the eyes, and it is in this faint blue light the imagination discerns the thousands of fantastic forms and figures that by general acceptance are termed stars; hence, while the astronomical display so frequently mentioned may be said to be entirely a creature of the imagination. there is at least some foundation for

the idea. Tibetan Penal Code.

The Tibetan penal code is curious, Murder is punished with a fine varying according to the importance of the slain, theft by a fine of seven to one hundred times the value of the article stolen. Here, again, the fine depends on the social importance of the person from whom the theft has been committed. The harborer of a thief is looked upon as a worse criminal than the thief himself. Ordeals by fire and by boiling water are still used as proofs of innocence or guilt, exactly as was the custom in Europe in the middle ages. And if the lamas never inflict death they are adepts at torture.

Literary. "Oh, I simply adore Meredith and Browning and Henry James," said the

gushing you. person.
"So do I." said Little Binks. "They are perfectly delightful. It's like sending your mind to a gymnasium. Erdo you read them in the original?"-New York Times.
